

CogniSprint Foundations Practice Worksheet

A printable warm-up across all six practice categories — no login required.

DRAFT — pending independent educational review. This worksheet is an authored draft matching the in-app Month 1 curriculum and is not yet approved for publication or sale.

1. Mental Math

Solve each without a calculator. Show your working in the margin.

- 1 $56 + 38 =$ _____
- 2 $91 - 47 =$ _____
- 3 $7 \times 12 =$ _____
- 4 What is 20% of 145? _____
- 5 $144 \div 12 =$ _____

2. Memory

Study this list for 20 seconds, then cover it and write it from memory below.

- 1 Study: lantern, compass, ledger, kettle, anchor
- 2 Write the list from memory, in order: _____

3. Focus

Scan the line once, left to right. Do not count twice.

- 1 Line: B 8 B 6 B B 3 B 0 B — how many exact letter B characters appear? _____
- 2 Line: the calm dock near the calm cove by the calm shore — how many times does "calm" appear?

4. Logic

Read the two statements, then write the conclusion that must follow — or write "no conclusion" if none does.

- 1 All certified inspectors carry a badge. This person carries a badge. Conclusion:

- 2 If a battery is fully charged, its light is green. The light is not green. Conclusion:
-

5. Observation

Circle the one code in each row that differs from the other two.

- 1 Row A: K9L3 K9L3 K9L8
- 2 Row B: Q7W2 Q7M2 Q7W2

6. Critical Thinking

Write one sentence identifying the flaw in each claim.

- 1 "Ice cream sales and drowning incidents rise together in summer, so ice cream causes drowning."
- 2 "This routine has the most 5-star reviews online, so it must be the best one."

Answer key

- Mental Math — 1) 94 2) 44 3) 84 4) 29 5) 12
- Memory — lantern, compass, ledger, kettle, anchor (exact order)
- Focus — 1) 5 exact B characters 2) "calm" appears 3 times
- Logic — 1) No conclusion follows: the rule only says certified inspectors carry a badge, not that only certified inspectors do, so a badge alone doesn't prove certification. 2) The battery is not fully charged: this is a valid inference, since the light being green was guaranteed by a full charge, and it isn't green.
- Observation — Row A: K9L3 differs by ending in 8 instead of 3 on the third item. Row B: Q7M2 differs by using M instead of W.
- Critical Thinking — 1) Correlation is treated as proven causation without ruling out a shared underlying cause (like warmer weather). 2) Popularity (review count) is treated as equivalent to quality, which the evidence doesn't establish.
